

Graduate Student Position at Dartmouth College

Dartmouth's PhD program in [Ecology, Evolution, Ecosystems, and Society \(EEES\)](#) is recruiting a graduate student broadly interested in climate variability and change and/or its consequences for people and ecosystems. The graduate student will develop their own research, be part of [Dartmouth's Climate Modeling & Impacts Group \(CMIG\)](#), and have the chance to work with faculty in [Geography](#), [EEES](#), and [Earth Sciences](#). A background in Earth, atmospheric, environmental, or hydrological sciences as well as experience with scientific computing and statistics are preferred, but not required. [CMIG](#) is committed to being a diverse and inclusive lab group; we encourage women, minorities, people with disabilities, and veterans to apply. Interested students should email [Justin Mankin](#) and if you'd like to discuss Dartmouth, the PhD program, or the lab group, you can arrange to meet with him during AGU. You are encouraged to apply by December 1, 2017 [via the online application](#), though the application submission deadline is flexible.
